Abstract: Part of RTD, the FasTracks Program goals are to provide improved transportation choices and options to the citizens of the District; provide additional transportation choices; add to the region's quality of life; increase transportation efficiency; and develop proactive plans for future regional growth. RTD Fas Tracks will be constructing a rail line extension to the existing Southeast Corridor. The Southeast Rail Line Extension will make the Southeast line even more successful than it is today. The current plan is to extend light rail transit service to the new RidgeGate Parkway Interchange by providing 2.3 miles of additional light rail, a kiss-n-Ride station at Sky Ridge Medical Center, a kiss-n-Ride station at Lone Tree City Center, and a new end-of line station at RidgeGate with a 2,000 space Park-n-Ride facility.
